

The MJP Hybrid waterjet concept combines the very best characteristics of the revolutionary MJP DRB series and the well known MJP Ultrajet series. Marine Jet Power proudly introduces a totally new product that is optimized for high-speed applications with a proven pump unit – all at a competitive price.

MJP Hybrid Waterjets

Features & Benefits

- Complete jet assembly, in aluminum frame for welding or bolting into hull structure.
- Well proven, full duplex stainless steel pump with superior wear strength. No separate wear liner.
- Part of intake tunnel in GRP for corrosion protection and minimum maintenance of intake structure.
- Mixed-flow jet technology with minimum tip clearance for superior performance.
- Inboard support bearing and standard shaft length prepared for intermediate coupling and shaft.
- Inboard hydraulics with tank unit and valves assembled on the jet.

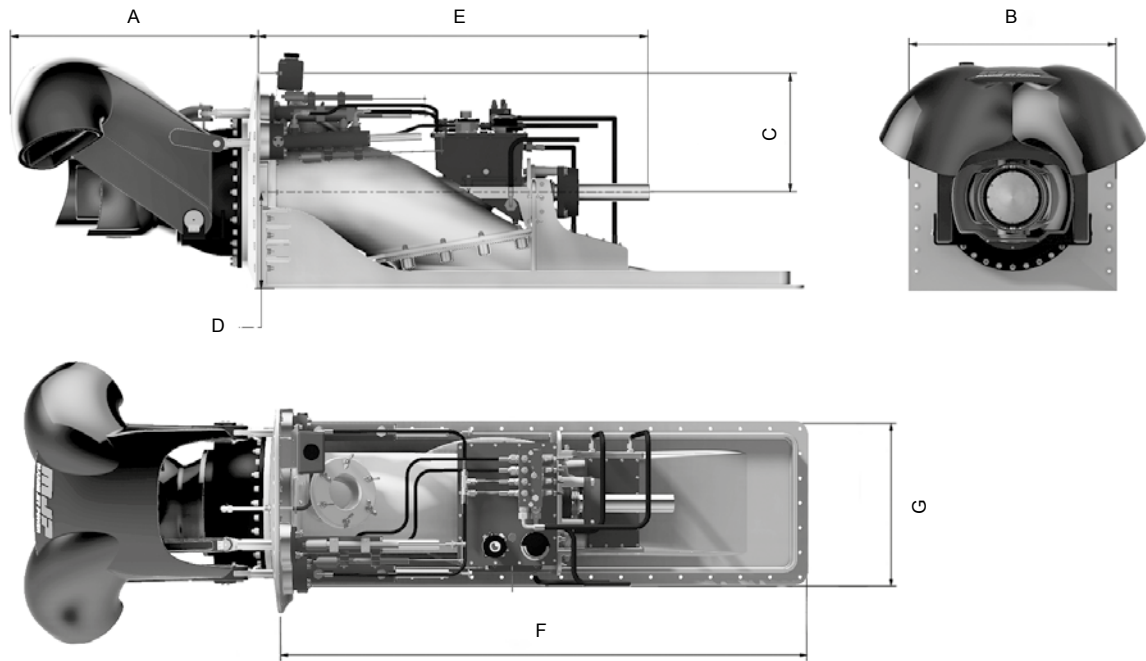

Description

The MJP Hybrid is a unique combination of MJP technologies that offers striking performance in an attractive package, suitable for all high-speed applications. It is a complete jet for fast mounting, welding or bolting, into the hull structure.

Standardized scope of supply

The MJP Hybrid is built for standardization reducing the need for many options. Intermediate shafting between jet shaft and gearbox flange, control system options and special intake shapes are examples of items that can be considered optional.

MJP HYBRID
